

# ANEESH KHERA

aneeshkhera.me

github.com/kapleesh

aneesh.khera@berkeley.edu

## Education

---

**University of California, Berkeley**, *Bachelors in Computer Science*

**Expected May 2018**

GPA: 3.84 | Upsilon Pi Epsilon: CS Honor Society

**Relevant Coursework:** Efficient Algorithms, Artificial Intelligence, Data Structures, Structure of Computer Programs, Discrete Math and Probability, Linear Algebra and Differential Equations

## Experience

---

**Infosys**, *Software Engineering Intern*

**Jun 2016 - Aug 2016**

- Developed the backend of an optimization engine for the client, CSX Transportation, to efficiently approximate the NP-hard job shop scheduling problem; Java
- Implemented a shifting bottleneck heuristic as a part of the algorithm to minimize overall tardiness of factory locomotive repair and maximize individual station usage
- Solved the  $1 \mid r_j \mid L_{\max}$  scheme with a branch and bound algorithm that improved time complexity from  $O(n!)$  to  $O(n^2 \log n)$ ; utilized a preemptive earliest due date rule in order to minimize lower bound checks
- Read and updated data from a SQL server; delivered output in the form of a Gantt chart; reduced existing makespans by over 37 hours for the average CSX job shop

**CS61A**, *Academic Intern*

**Jan 2016 - May 2016**

- Taught students programming fundamentals in python, scheme, and SQL during labs and office hours
- Helped students gain a better understanding of coding concepts such as recursion, inheritance, and abstraction

**Keck Medicine of USC**, *Software Analyst Intern*

**Jun 2014 - Aug 2014**

- Learned a computational biology software, MITOSym, to analyze liver mitochondria
- Utilized MATLAB to create functional models, formulate oxygen intervals, and perform regression analysis
- Trained fellow lab researchers to use relevant data to construct large-scale graphs and predictive charts

## Skills (comfort level in parentheses)

---

**Languages:** Java (5/5), Python (5/5), Scheme (4/5), iOS/Swift3 (3/5), SQL (3/5), MATLAB (3/5)

**Frameworks/Web:** HTML/CSS (4/5), Django (3/5), Rails (3/5), JavaScript (2/5)

**Software:** Git (4/5), LaTeX (4/5), Excel (3/5), Xcode (3/5)

## Projects

---

**Dress Me | Django, HTML, CSS, JavaScript**

- Built a web application that suggests outfits based on a user's wardrobe, daily schedule, and weather; utilized the OpenWeatherMap, Geopy, and Google Calendar APIs
- Implemented features to monitor laundry and recommend clothes to buy/donate

**UPE Calendar | Django, HTML, CSS**

- Worked to improve the website: <http://upe.cs.berkeley.edu/>
- Developed a Past Events feature to give students access to recruiter information and view highlights from previous info-sessions

**Bench Blog | Rails, HTML, CSS**

- Built a web application for bloggers to create personalized sports feeds
- Designed to promote blogging during matches with in-game statistics

**Text Editor | Java, JavaFX Libraries**

- Created a fully functional text editor, very similar to Notepad
- Implemented various data structures such as Doubly LinkedLists and Stacking Arrays to optimize time efficiency for cursor and text display
